6 UMP Late Model Series Championships

50+ Feature Wins

2007 Feature Article in Dirt Late Model Magazine

“In our business good lubrication can be the difference between getting to the winner’s circle or going home with a broke car. I wouldn’t think of running without **Micro-Armor** anymore. Someone I trusted in the industry gave me a bottle of **Micro-Armor 1000** Engine and Oil Treatment. Immediately our engine temperature dropped from 220F to 180F. The car even seemed to be more responsive on the throttle. We were so impressed we went back to the store and bought the **Micro-Armor 4000** Spray Lube and **Micro-Armor 6000** Grease. Since we started spraying the heim joints and suspension with Micro-Armor, we haven’t even heard a squeak. And try jacking your car up and spinning the tire with your current grease. Then pack the wheel bearings with **Micro-Armor** grease and watch it spin. Spin it after you’ve run it in a race and you’ll be even more amazed.
